

Carbon Reduction Plan

Supplier name: Immedica Pharma UK Ltd
 Publication date: 15th August 2024

Company Overview

Sustainability is ingrained in the core of our business model. Our foremost commitment is to provide treatments to patients with unmet medical needs, thereby enhancing the quality of life for them and their families. However, this approach necessitates operating sustainably. For us, sustainability encompasses empowering our employees, fostering a positive work environment at Immedica, cultivating sustainable partnerships, and establishing a socially and environmentally responsible business that adheres to legal regulations. Immedica’s Sustainability strategy is closely aligned with the United Nations Sustainable Development Goals (SDGs).

Commitment to achieving Net Zero

Immedica Pharma UK Ltd, a subsidiary of Immedica Pharma AB, commits to achieving Net Zero emissions by 2045. The emissions reported in this plan pertain to Immedica Pharma UK Ltd.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2022	
EMISSIONS	TOTAL (tCO _{2e})
Scope 1	0 *
Scope 2	0 *
Scope 3 (Included Sources)	2,129 Category 1: Purchased goods and services. Emissions are all calculated based on spend. Category 4: Upstream transportation and distribution. Emissions are based on spend and actual data. Category 6: Business travel. Emissions are based on spend.
Total Emissions	2,129

* Scope 1 emissions pertain to company cars. Since the UK affiliate does not operate any company cars, this figure is zero. Scope 2 emissions are associated with energy consumption for company-related facilities such

as offices and manufacturing plants. As the UK affiliate does not manage such facilities and employees work from home, these emissions are also zero.

Current Emissions Reporting

Reporting Year: 2023	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	0
Scope 2	0
Scope 3 (Included Sources)	2,783*
Total Emissions	2,783

* Immedica works with Carbon Accounting software platform vendor Persefoni to calculate its full GHG emissions footprint. Persefoni uses both activity and spend data to calculate GHG emissions, with scope 3 upstream emissions associated with suppliers and third parties largely based on spend analysis of Immedica’s internal data. This requires environmentally-extended input-output (EE-IO) modeling, linking economic consumption activities and environmental impacts. The scope 3 emission increase is related to the increase of the business as a whole. In 2023 our revenues and cost of goods sold increased by 50 per cent compared to 2022 and the average number of employees grew by 28 per cent.

Emissions reduction targets

Immedica aims to support the transition to a low-carbon economy, with an ambition to achieve net zero GHG emissions in our operations and through our supply chain.

By 2029 we aim to reduce our total GHG emissions by 15% from 2022 levels.

Carbon Reduction Projects

Below you will find examples of carbon reduction measures and projects that have been completed or are being implemented and are in line with the key components of our carbon reduction plan.

- Transfer to renewable energy
 - Green Office Initiatives – Using 100% green energy and reducing paper usage through cloud based systems and adopting remote working.
- Transition from spend based scope 3 emissions to actual GHG data.
 - Invest in carbon capture, utilization, and storage (CCUS-Carbon Capture Utilization and Storage) technologies.
- Company travel policy
 - Updated and implemented a new travel policy based on sustainable travel options with the use of trains and public transport suggested in place of personal vehicles and air travel when appropriate.

- Green Supply Chain Management
 - Measure environmental impact of the supply chain and work with suppliers to reduce their emissions.
 - Include sustainability criteria in procurement policies and practices.
 - Develop a green procurement policy requiring all suppliers to meet specified emissions reduction targets.
 - Choose suppliers that adopt sustainable sourcing by prioritising the use materials and products that are sustainably sourced and have lower carbon footprints.
- Carbon Offsetting:
 - Invest in reforestation projects
- Waste management:
 - Support plastic free campaigns and initiatives
- Employee Engagement and Training:
 - Engage employees in sustainability matters through training programs that emphasise the importance of reducing emissions and managing waste.
- Engaging with third-party company to assess GHG emissions
 - Immedica will work to impact and support its business partners to be able to deliver actual emissions to more accurately track and identify prioritised areas for reduction.
- Alignment with the United Nations Sustainable Development Goals (SDGs), in particular Goal 13 on climate action

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

A handwritten signature in blue ink that reads 'Simon Falk'.
