

Zepzelca™ (lurbinectedin) approved in Qatar for the treatment of metastatic Small Cell Lung Cancer (SCLC)

Immedica Pharma AB announces that the MOPH Pharmacy & Drug Control Department has approved Zepzelca™ (lurbinectedin) – for the treatment of metastatic Small Cell Lung Cancer (SCLC).

“We are pleased to bring a new treatment choice to patients in Qatar with relapsed SCLC,” said Anders Edvell, CEO at Immedica Pharma. “The Qatar MOPH approval of lurbinectedin underscores its potential to fill an unmet need in the SCLC community.”

Immedica has a strategic alliance with Pharma Mar, the biopharma company which has successfully developed lurbinectedin. Both companies are committed to bringing innovative therapies to patients worldwide.

The approval of Zepzelca by Qatar MOPH Pharmacy & Drug Control Department is based on results from an open label, multi-center, single-arm clinical trial in 105 adults with relapsed SCLC1. The data, which appeared in The Lancet Oncology, in the May 2020 issue, showed that in relapsed SCLC, monotherapy with lurbinectedin had an overall response rate of 35% and a median duration of response of 5.3 months according to investigator assessments. The FDA approval is based on the same data.

About lurbinectedin

Lurbinectedin (PM1183) is a synthetic compound currently under clinical investigation. It is a selective inhibitor of the oncogenic transcription programs on which many tumors are particularly dependent. Together with its effect on cancer cells, lurbinectedin inhibits oncogenic transcription in tumor-associated macrophages, downregulating the production of cytokines that are essential for the growth of the tumor. Transcriptional addiction is an acknowledged target in those diseases, many of them lacking other actionable targets.
